

SHAILESH DNYANESHWAR KALE

Software Developer | MERN Stack | Frontend Engineer

shaileshkale87730@gmail.com | +91 9923110630 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Software Engineer with 2+ years building scalable web applications across enterprise and startup environments. Eliminated 35% of legacy technical debt, boosted page load speed by 30%, and closed 40+ critical issues while maintaining a 100% on-time sprint delivery rate. Advanced from intern to full-time engineer within 4 months — among the fastest team conversions at AeroGenix. Core stack: React.js, TypeScript, Node.js, Redux Toolkit, and MongoDB. Known for taking ownership of complex features, guiding junior engineers, and shipping with zero regressions.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, RESTful APIs, Socket.IO, JWT

Databases: MongoDB, MySQL, PostgreSQL, Redis

Tools & Platforms: Git, GitHub, Vercel, Postman, Figma, Webpack, CI/CD

Concepts: RBAC, MVC, system design, Agile/Scrum, performance optimization

WORK EXPERIENCE

Frontend Developer | *AeroGenix, Bangalore (Remote)* Oct 2025 – Present

- Architected an RBAC module with JWT authentication and route-level guards — enforcing 100% access-control compliance across Admin, Manager, and Employee roles in a multi-tenant platform.
- Spearheaded refactor of a legacy codebase: decomposed monolithic components into typed, reusable hooks and atomic units, eliminating 35% technical debt and cutting re-render overhead by 20%.
- Identified and removed redundant network calls via request deduplication and debouncing — boosting page load speed by 30% and trimming server round-trips by ~40%.
- Triaged 25+ production bugs spanning form validation, state synchronization, and edge-case routing — restoring reliability across 3 high-traffic user flows.
- Guided 2 junior engineers on component design and code-review standards, maintaining zero-regression output across 4 consecutive sprints; recognized by the team lead for delivery consistency.

Tech Stack: React.js, Redux Toolkit, TypeScript, Node.js, JWT, Tailwind CSS, Git, Agile/Scrum

Associate Software Engineer (Intern) | *AeroGenix, Bangalore (Remote)* Jun 2025 – Oct 2025

- Implemented 10+ typed, reusable UI components with React.js and TypeScript — cutting render cycles by 20% through selective memoization and prop normalization.
- Traced and resolved 15+ cross-browser layout and state inconsistencies, raising interface reliability across Chrome, Firefox, and Safari.
- Converted to full-time engineer within 4 months of joining — one of the fastest intern-to-employee advancements on the team — driven by feature delivery and code quality.

Tech Stack: React.js, TypeScript, Node.js, Git, CSS3

Software Developer Intern | *Hubnex Labs, Gurugram (Remote)* Mar 2024 – Sep 2024

- Authored and maintained modular UI features using JavaScript and React.js, lowering defect reports by 30% through structured code reviews and targeted unit tests.
- Collaborated with design and backend engineers to ship five production-ready features on schedule, increasing team throughput by 20% over two release cycles.
- Streamlined key user flows — reducing average task-completion steps — contributing to a 15% rise in measured satisfaction scores.

Tech Stack: React.js, JavaScript, RESTful APIs, Git

Software Developer Intern | *Techgicus Software Solutions, Nagpur* Mar 2023 – Dec 2023

- Independently scoped and launched 5 major features over a 9-month engagement — owning requirements gathering, implementation, and QA sign-off for each.
- Applied code splitting, lazy loading, and event delegation to the JavaScript rendering pipeline, raising application speed by 25%.
- Partnered with QA and backend teams to trace and close 40+ critical interface defects, measurably improving pre-release quality across three consecutive builds.

Tech Stack: JavaScript, React.js, HTML5, CSS3, Git

KEY PROJECTS

Event Management Platform – [Live Site](#)

- Engineered a full-stack MERN application for event lifecycle management — supporting multi-role access via JWT authentication and RBAC for Admin and Employee tiers.
- Structured an Express.js backend with a layered middleware pipeline, MongoDB schema validation, and MVC-based routing for complete CRUD coverage.
- Launched a responsive dashboard with Redux Toolkit, an API abstraction layer, and automated deployment via CI/CD pipeline on Vercel.

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, RESTful APIs, Redux Toolkit, Tailwind CSS, Vercel

Employee Management System (HRMS) – [Live Site](#) | [GitHub](#)

- Designed an enterprise HRMS with attendance tracking, shift scheduling, leave management, and granular role-based permissions across multiple user tiers.
- Wired WebSocket-driven live updates and a Redis caching layer, reducing average API latency and sustaining throughput under concurrent user load.
- Built async Node.js services with MongoDB compound indexing and horizontal-scaling patterns — handling high-volume data operations without performance degradation.

Tech Stack: React.js, Node.js, Express.js, MongoDB, Redis, WebSockets, JWT, RESTful APIs

EDUCATION

Bachelor of Commerce in Computer Application (BCCA)^{2020 – 2023}

VMV College, Nagpur University (RTMNU), Maharashtra

CERTIFICATIONS

HackerRank Intermediate JavaScript Certification – [View Certificate](#)

HackerRank Frontend Developer (React) Certification – [View Certificate](#)
